Solar success for UEL's 'evil genius'

A UEL STUDENT IS AWAITING the publication of his fourth book. Gavin Harper is completing his MSc in Architecture: Advanced Environmental and Energy Studies, a unique programme at UEL run in conjunction with the Centre for Alternative Technology in Wales. The programme's flexible nature allows him to study while working on a range of technical books for US publishing giant McGraw-Hill. 'Solar Energy Projects for the Evil Genius', largely inspired by his studies, is due for publication this summer.

UEL is now establishing a Sustainability Technologies Research Institute to explore and develop new methods involved in generating energy, recycling and reusing materials, and the construction, water and waste industries, especially in the Thames Gateway.
